

# Advanced detection and monitoring of glaucoma progression

## Henson 9000

The Henson 9000 offers advanced tests for **glaucoma detection and management**, a full suite of analytical tools and networking capabilities.

- **Improve sensitivity** to central defects with the 3.5-minute Smart Supra test that combines 24-2 and 10-2 patterns
- **Optimize test performance** with ZATA's smart threshold-related terminating criteria that also includes powerful tools for analyzing progression
- **Reduce false positives**, speed up test times and enhance workflow by loading prior ZATA threshold test values
